Mega-cap technology: scale, growth and margin

Latest five annual 10-K periods per company | USD | GAAP actuals

Equity Research

Mega-cap technology

Amazon leads latest-year revenue scale; NVIDIA leads both revenue growth and GAAP net margin.

Scope

The comparison covers the latest five fiscal years in original 10-K filings, with both fiscal-year end and filing date on or before the cutoff. Revenue growth is current-year revenue divided by prior-year revenue, minus one. Net margin is GAAP NetIncomeLoss attributable to parent divided by revenue. No estimates or non-GAAP adjustments are used.

Findings

Amazon's $716.9bn revenue base is 72% larger than Apple's $416.2bn, the next-largest latest-year figure. NVIDIA's 65.5% growth is well ahead of Microsoft's 17.8%, while its 55.6% net margin exceeds every peer.

The five-year history shows the scale of NVIDIA's shift: revenue rose from $26.9bn in FY2022 to $215.9bn in FY2026, and net margin moved from 16.2% in FY2023 to 55.6% in FY2026. Amazon's margin recovered from a 0.5% loss in FY2022 to 10.8% in FY2025. Apple's FY2023 revenue decline of 2.8% is retained in the series.

Interpretation

These are reported operating outcomes, not causal estimates or investment recommendations. Scale, growth and margin rank different companies at the top and should be read separately.

Table 1: Latest eligible fiscal year

Revenue in USD billions; growth and net margin in percent.

Company	FY end	Revenue ($bn)	Growth (%)	Margin (%)
AAPL FY2025	2025-09-27	416.2	6.4	26.9
MSFT FY2026	2026-06-30	331.8	17.8	40.3
NVDA FY2026	2026-01-25	215.9	65.5	55.6
GOOGL FY2025	2025-12-31	402.8	15.1	32.8
AMZN FY2025	2025-12-31	716.9	12.4	10.8

Source: original SEC 10-K XBRL facts. Fiscal-year ends are shown in ISO format.

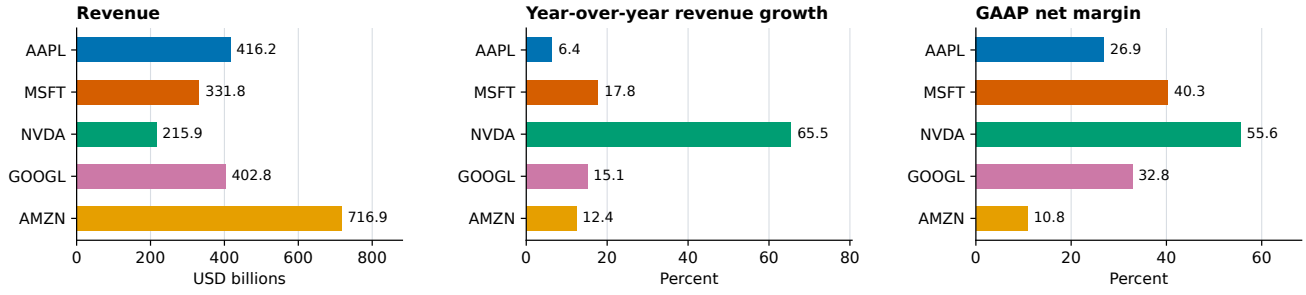

Fiscal-calendar caution

Latest periods end 27 Sep 2025 for Apple, 30 Jun 2026 for Microsoft, 25 Jan 2026 for NVIDIA, and 31 Dec 2025 for Alphabet and Amazon. They do not cover identical economic windows. Fiscal years can also span 52 or 53 weeks.

Net-income caution

GAAP net income can include tax, investment and other non-operating effects. Margin changes should not be interpreted as pure operating-margin changes without further statement analysis.

COVERAGE

AAPL, MSFT, NVDA, GOOGL, AMZN

Sources and dates. SEC EDGAR 10-K filings and XBRL facts via kimi-datasource; cutoff 30 September 2026. Original accessions are linked on page 2. Raw extracts are preserved under `data/raw/sec_edgar/`.

Checks. All 25 annual rows passed accession, period, unit and calculation checks. Verification is reconciliation to retained source records, not independent re-audit.

RESEARCH MEMO

Annual history and audit trail

Annual comparison. Five fiscal years per company; revenue in USD billions, growth and net margin in percent. Negative values are reported outcomes, not missing data.

Table 2: Five-year annual comparison

Source: SEC EDGAR 10-K XBRL facts via kimi-datasource. Growth uses the preceding fiscal year; net margin uses GAAP NetIncomeLoss / revenue.

Ticker	FY	Fiscal-year end	Revenue ($bn)	Growth (%)	Net margin (%)
AAPL	2021	2021-09-25	365.8	33.3	25.9
AAPL	2022	2022-09-24	394.3	7.8	25.3
AAPL	2023	2023-09-30	383.3	-2.8	25.3

Method and definitions

Original 10-K facts are selected by company, fiscal year, accession and fiscal-year end. Annual durations of 330–380 days are required; later comparative-filing duplicates are excluded. Revenue uses the consolidated reported annual value. Net income uses `us-gaap:NetIncomeLoss`. Calculations use unrounded USD inputs; displayed values are rounded to one decimal.

The source file contains 30 company-periods: the 25 displayed years plus one prior-year revenue baseline per company. Fiscal-year end dates, filing dates, concepts, accessions and SEC links remain attached to each source row.

Verification status: PASS

- 25 annual rows; five years for each of five companies.
- 30 retained source periods, including growth baselines.
- USD, annual duration, 10-K form and original-accession checks passed.
- Growth and net margin recomputed for every row; no missing values.
- Latest-year revenue and net income matched separate structured income-statement extracts for all five firms.
- Chart values and HTML tables generated from the same checked dataset.

Reproducibility. Run `python3src/build_annual_comparison.py`. Checked outputs are in `output/tables/`; the full annual chart is in `output/figures/`. Preparation used AI assistance for retrieval, calculation and drafting.

Limitations. Fiscal periods are not calendar-aligned; no segment, tax or one-off normalization is attempted. AI-generated analysis; not investment advice.
